PROFESSIONAL SUMMARY

Final-year AI/ML student specializing in Generative AI and RAG. Built a production-style RAG chatbot at Bosch (Azure OpenAI GPT-4o, LangChain) that cut document review time by 70% and improved retrieval accuracy by 80%, with results validated via precision, recall, and F1-score across the ML pipeline.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL

Machine Learning & NLP: Machine Learning, Deep Learning, Natural Language Processing (NLP), Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Generative AI, Model Evaluation, Predictive Analytics

AI Frameworks & Platforms: Azure OpenAI (GPT-4o), LangChain, Streamlit, ChromaDB, Vector Databases, Embeddings, OCR (Optical Character Recognition)

Tools & Practices: Git, Data Preprocessing, Model Optimization, Prompt Engineering, Chatbot Development

PROFESSIONAL EXPERIENCE

Generative AI & RAG Intern Oct 2025 - Dec 2025

Bosch, Bidadi, India

Highlight: Built and deployed a production RAG chatbot that cut document review time by 70% and improved retrieval accuracy by 80%.

- Built and deployed a secure RAG chatbot using Streamlit, Azure OpenAI (GPT-4o), LangChain, ChromaDB, OCR, and embeddings, cutting manual document review effort by 70%.
- Designed and implemented a custom keyword- and block-based retrieval system that tagged OCR-extracted sections with unique IDs and titles, increasing query response accuracy by 80%.

PROJECTS

EEG-Based Emotion Recognition System Using Brain-Computer Interface (BCI) 2024

Highlight: Reached 99.8% classification accuracy detecting emotion from EEG signals using Neural Networks.

- Built a real-time emotion detection system on the SEED-IV dataset, classifying happy, sad, neutral, and fear states from EEG signals across eight brain-region channels.
- Compared three models - Neural Networks, K-Nearest Neighbors, and Support Vector Machines - for classification accuracy across the four emotion classes.
- Reached 99.8% classification accuracy with Neural Networks, ahead of both KNN and SVM across all tested channels.

Feedback AI 2026

Highlight: Built an AI-powered feedback classifier processing 11,555 reviews at 81.5% accuracy and 0.76 macro F1.

- Built and deployed a feedback taxonomy classifier using MiniLM embeddings, cosine similarity, and HDBSCAN-based unsupervised theme discovery, classifying 11,555 Google Play reviews with a human-in-the-loop approval workflow for new categories.
- Developed and validated an interactive Streamlit/Plotly dashboard, testing classifier performance on a labeled holdout set at ~81.5% accuracy and ~0.76 macro F1 with modular, tested Python code.

CERTIFICATIONS & ACHIEVEMENTS

- SAP Innothon Finalist (Top 4 of 200+ teams): designed a customer-support architecture to resolve complaints and queries within SLA timelines over a two-week competition, advancing through two judging rounds including a final-panel presentation.
- Python for Data Science, AI & Development - IBM
- AI Engineer Core Track: LLM Engineering & RAG

EDUCATION

Bachelor of Engineering (B.E.), Artificial Intelligence & Machine Learning Expected Aug 2026

BMS Institute of Technology & Management | CGPA: 8.98/10
